**Steps to install presets in Adobe Lightroom:**

1. Extract the zipped file.
2. In the new folder developed after extraction you will find the all presets grouped into 27 folders, they contain preset files with the .lrtemplate extension.
3. Open Adobe Lightroom and click on Edit at the top and then click on Preferences.
4. A new window will appear. Select the Presets tab.
5. Click on the button labeled Show Lightroom Presets Folder.
6. A new folder Adobe that appears. Click on the folder named Lightroom and then click on Develop Presets. Copy the 27 folders containing your presets into the Develop Presets folder.
7. Simply restart Lightroom and that's it. Your presets can now be found in the Presets section of the Develop module of Lightroom.
